Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 17 and 21-30 are allowed over the closest references cited below.

The present invention is drawn to a process for producing a catalyst comprising contacting (a) triphenylbismuth, (b) pentafluorophenol, and (c) silica. Another aspect of the invention is a process for producing addition polymer in the presence of the catalyst produced by the claimed process.

Ogane (U.S. 2002/0143124) and independently, Ogane (DE 101 64 188) broadly disclose a modified particle prepared by a process comprising contacting silica with a compound of formula $M^1L^1_m$ (M^1 is an atom from group 1, 2, 12, 14, or 15, which includes bismuth) and a compound of formula $R^1_{t-1}TH$ (R^1 is an electron withdrawing, halogenated hydrocarbon group, T is oxygen), and a compound of formula $R^2_{t-2}TH_2$. The resulting modified particle is contacted with an aluminoxane and a metallocene to produce a catalyst for polymerization of ethylene with α -olefins. Neither reference discloses the compound Ph_3Bi specifically. The present inventors have shown in a declaration under 37 C.F.R. § 1.132 sufficient showing of unobviousness over the prior art. The catalyst of the present invention unexpectedly shows a significantly higher level of polymerization activity compared with the catalyst described in Ogane *et al.*, which uses Et_2Zn as the compound of formula $M^1L^1_m$. As such, the process of the instant claims is neither taught nor made obvious in Ogane.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
